bistable - impulse relays

Functions

SET/RESET (RESET) - Switching ON and OFF, controlled by pulses on the contact S.

After the supply voltage has been applied, the output relay R remains switched off.

When a pulse occurs on the control input S, the output relay R is activated (SET). This status lasts until another control pulse occurs - then, the output relay R is switched off (RESET).

Further pulses which will occur on the control input S will change the R contact status into an opposite one.

Switching the supply off will cause switching the output relay R off.

Switching on the supply again and applying a control pulse to the S input will switch the R relay on. Further control pulses which will occur on the control input S will change the R contact status into an opposite one.

Additional functions

LEDs: green U, yellow R - are lit permanently.

Triggering: the relay is triggered by connecting the contact S to the A1 terminal, from connected in parallel switches / control buttons. For DC supply, the positive pole may be connected to the A1 or A2 terminal.

Supply:

- **RPB-2Z-A230:** the relay may be supplied with AC voltage 50/60 Hz of 195,5...264,5 V,
- **RPB-2Z-U24:** the relay may be supplied with DC voltage or AC voltage 50/60 Hz of 20,4...27,6 V.

U - supply voltage; R - output state of the relay; t - time axis
